

11. Method for splicing a target nucleic acid
with a separate nucleic acid molecule,
the step of:

2. Method for splicing a target nucleic acid molecule with a separate nucleic molecule, comprising the step of:

3. The method of claim 1, wherein said
25 catalytic nucleic acid molecule is active to cleave said
target nucleic acid molecule and to splice said separate
nucleic acid molecule with said target nucleic acid
molecule.

5. The method of claim 1 or 2, wherein said contacting is in vitro.
